

Gerlin Orlando Torres Saavedra

Senior Java Software Engineer | Event-Driven & Reactive Microservices | DDD · Hexagonal · Kafka · Vert.x

Cartagena de Indias, Colombia · Full Remote · Freelance  gerlin.torres@gmail.com ·  [linkedin.com/in/gerlin-orlando-torres-saavedra](https://www.linkedin.com/in/gerlin-orlando-torres-saavedra)

PROFESSIONAL PROFILE

Software Engineer with **over 10 years of experience** designing and building mission-critical backend platforms based on **event-driven Java microservices** for banking, electronic payments, investment funds, telco, and large corporations (Inditex, El Corte Inglés, Bankinter, Evo Banco, Bancolombia, Protección, MasOrange). Specialized in **Java 8–21, Spring Boot 3, hexagonal architecture, and Domain-Driven Design (DDD)**, with proven command of **Kafka** (consumers and domain events), reactive programming with **Vert.x** in production, **idempotency, asynchronous processing**, and transactional consistency at scale over **PostgreSQL, MySQL, and Redis**. Real experience modeling complex domains — beyond CRUD APIs— with aggregates, value objects, invariants, state machines, and audit logs, as well as query and index optimization over high-volume relational models. Available as a freelancer, full remote, for immediate incorporation into new projects.

CORE SKILLS

Java 8/11/17/21 Spring Boot 3 Vert.x Kafka Event-Driven Architecture DDD Hexagonal Architecture
Clean Architecture Microservices Reactive Programming Idempotency Asynchronous Processing PostgreSQL MySQL
MongoDB Cosmos DB / Gremlin Redis Query & Index Optimization Multitenancy State Machines Audit Log
Transactional Integrity ISO 8583 REST SOAP OpenAPI Kubernetes OpenShift Docker Azure
Google Cloud Platform (GCP) Terraform GitHub Actions Jenkins CI/CD JUnit Karate TDD SonarQube Grafana
Prometheus Zipkin Scrum

KEY ACHIEVEMENTS

- **Designed and deployed a near real-time KPI platform** (Inditex/Globant) on **Java 21, Kafka, PostgreSQL, Cosmos DB/Gremlin, and Redis**, processing high event volumes with stable response times under load peaks.
- **Built reactive microservices with Vert.x in Java and Go** (MasOrange, telco sector) over **PostgreSQL, Redis, and Kafka**, orchestrating long-running business processes with **Cadence** on Google Cloud Platform.
- **Implemented an idempotent payments module** with automatic transaction rounding, guaranteeing full transactional integrity between debit and credit (MySQL).
- **Designed a domain model with strict financial invariants** (SPIRIT/Protección), ensuring coherence between daily operations and their closing value, with no discrepancies against market sources.
- **Modernized MasterCard transaction processing (ISO 8583)** for El Corte Inglés, guaranteeing transactional accuracy and financial compliance in a mission-critical environment.
- **Normalized and integrated multiple heterogeneous third-party APIs** into Evo Banco's corporate API Gateway, enforcing consistent RESTful contracts without degrading security or performance.
- **Centralized microservices configuration management** at Bankinter through a Consul-based platform, eliminating misalignments between services and environments.
- **Designed and exposed a documentary consultation REST API** for Bancolombia with exhaustive traceability and strict regulatory audit compliance over sensitive customer information.
- **Technically led a 4-person team** (QA, functional analyst, and developers), ensuring exhaustive traceability and auditing in regulated financial domains.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer (Java/Go) — MasOrange (Freelance) · Jan 2026 – Mar 2026

- Delivered reactive, polyglot **event-driven Java microservices** in **Vert.x (Java) and Go** for the *mas-collections* telco billing platform, sustaining low-latency processing under concurrent load.
- Ensured reliability and fault tolerance in distributed transactions by orchestrating long-running business processes with **Cadence**, eliminating inconsistent states under partial failures.
- Integrated transactional persistence in **PostgreSQL** and caching in **Redis** with asynchronous messaging and **Kafka consumers**, reducing coupling between monorepo services.
- Accelerated the CI/CD cycle by building **Jenkins** and **GitHub Actions** pipelines over a monorepo compiled with **Bazel**, with coverage and quality verified in **SonarQube**.
- Automated deployments to **Kubernetes** with **Argo CD** (GitOps) over **GCP** infrastructure defined as code with **Terraform**, packaging services with Docker and Helm.

Senior Java Software Engineer — Globant · Aug 2023 – Present

- Designed and lead a near real-time KPI calculation platform for Inditex with **Java 21 and Spring Boot 3**, maintaining stable response times even under load peaks.
- Implemented **event-driven** flows with **Kafka consumers** of domain events in pub/sub, decoupling asynchronous processing between services.
- Modeled a global product hierarchy over **Cosmos DB/Gremlin, PostgreSQL, and Redis**, guaranteeing consistency and integrity across three heterogeneous data engines.
- Optimized the data lifecycle in high-volume calculations (monthly, semi-annual, and annual), sustaining performance without degrading availability.
- Ensured quality with **JUnit, Karate, and ICarUS** (unit, integration, E2E, load, and chaos testing) and end-to-end observability with **Grafana, Prometheus, and Zipkin**.
- Deployed continuously to **Kubernetes** with **GitHub Actions and Argo Workflows**, reducing the time between commit and production.

Senior Software Development Engineer — Paradigma Digital · Apr 2021 – Mar 2024

- Technically led the strategic **AIDANA** microservice (Inditex), unifying dispersed data with **Redis and Kafka PIPE** and sustaining minimal latencies under high load.
- Built the **Programa.cat** backend with **PostgreSQL/JPA/Hibernate, Kafka** and domain events, integrating heterogeneous criteria across public administrations with full traceability.
- Guaranteed transactional integrity and protocol compatibility in MasterCard **ISO 8583** processing (EVOLVE, El Corte Inglés) in a mission-critical environment.
- Raised delivery quality with **Jenkins/GitHub Actions** pipelines, **SonarQube**, and mutation tests, reinforcing the reliability of institutional platforms.

Java Architect — Grupo Ditech · Oct 2019 – Apr 2021

- Normalized multiple heterogeneous third-party APIs into **Evo Banco's** corporate API Gateway, enforcing consistent RESTful contracts without degrading security or performance.
- Designed a multi-service configuration platform with **Consul** for **Bankinter**, eliminating misalignments between services and environments and reducing configuration incidents.
- Defined architecture standards and API governance (**Azure API Management**), raising technical coherence across teams at two banking institutions.

Java Technical Lead — Makers Solutions S.A.S · Nov 2018 – Oct 2019

- Led a **4-person team** (QA, functional analyst, and 2 developers) on the financial project **SPIRIT** (Protección), defining architecture, priorities, and quality standards.
- Designed daily portfolio valuation flows with strict consistency invariants, eliminating discrepancies between internal operations and market sources.
- Reduced operational incidents and improved the availability of information used in investment decisions through reliable closing windows and full traceability.

Software Engineering Analyst — Personalsoft S.A.S / Bancolombia · Nov 2017 – Oct 2018

- Designed and exposed a unified documentary consultation **REST API** integrated with Oracle WCC, replacing individual integrations and reducing access times.
- Implemented exhaustive traceability and audit controls over sensitive customer information, complying with strict banking regulatory security policies.

Senior Java Developer — integ.ro · Sep 2017 – Nov 2017

- Developed an **idempotent payments module** in Java 8/Spring Boot over **MySQL**, guaranteeing full transactional integrity between debit and credit.
- Implemented automatic transaction rounding with transfer to micro-savings, ensuring a traceable and consistent payment flow for the end user.

Other experience

Senior Solutions Analyst — everis (VUCE portal, SOAP integrations with DIAN, INVIMA, ICA and other government entities) · Software Developer — PRAGMA S.A. (+Protección portlets on WebSphere Portal) · Java Developer Analyst — ingemedic & Metrología · Faculty / Junior Developer — Comfenalco.

TECH STACK

Java 8/11/17/21 · Go · Spring Boot 3 · Vert.x · Kafka · Redis · PostgreSQL/MySQL · Cosmos DB/Gremlin · MongoDB · DDD · Hexagonal Architecture · Microservices · Cadence · Kubernetes · OpenShift · Docker · Argo CD · Azure · Google Cloud Platform (GCP) · Terraform · GitHub Actions · Jenkins · JUnit · Karate · TDD · SonarQube · Grafana/Prometheus/Zipkin · React · Angular

AVAILABILITY

Freelance · Full remote · Available for immediate incorporation into new projects.
